Project Overview (Optional)

Milestone 2 is the next step in my development of the "Fake Store" app, and it centres on enhancing user interaction with the shopping cart. Making sure everything functions properly and intuitively is the main focus of this phase, which is made possible by Redux and the reduxjs/toolkit for state management.

Goals:

Incorporate Redux: Redux is being added to the mix to aid in better state management for the application. This should result in more responsiveness across the app thanks to seamless updates and transitions.

Set Up Bottom Tab Navigation: We're including a useful bottom-of-the-screen navigation bar. This makes switching between product browsing and shopping cart checkout extremely simple for users.

Boost Shopping Cart Features: Our goal is to create an extremely interactive shopping cart. Users won't experience any lag and will be able to quickly adjust product quantities and view real-time updates, including the total cost and item count.
